

What is claimed is

1. A computer for a reproducing medium,  
comprising:

reading means for reading identification  
5 information from a medium set in the computer for  
identifying the medium;

means for obtaining related information about the  
medium in accordance with the identification information  
read from the medium; and

10 control means for controlling displaying of the  
obtained related information on a display.

2. The computer according to claim 1 further  
comprising storing means storing addresses of the  
related information, and obtaining means for obtaining  
15 related information from a server which has the related  
information corresponding to the address, and a program  
for displaying obtained related information.

3. The computer according to claim 1 wherein the  
related information is stored in a medium other than the  
20 set medium, and the related information stored in the  
other medium is read and stored in the computer.

4. The computer according to claim 1 wherein the  
related information corresponding to the identification  
is obtained from a server.

25 5. The computer according to claim 2 further  
comprising manual input means for correlating the  
obtained related information with an address and storing  
the correlated information.

6. The computer according to claim 2 further comprising means for transmitting the identification information to a server so that corresponding related information is obtained.

5 7. The computer according to claim 2 further comprising retrieving means for retrieving addresses of related information corresponding to the identification information.

8. A computer for a reproducing medium,  
10 comprising:

reading means for reading address of related information from a medium set in the computer;

means for obtaining related information corresponding to the read-out address; and

15 control means for controlling displaying of the obtained related information on a display.
